Plaintiff DAVIS JOINT UNIFIED SCHOOL DISTRICT ("Plaintiff," "DJUSD," or "District") hereby brings the following complaint for damages against JUUL Labs, Inc., f/k/a PAX Labs, Inc. ("JUUL") as a result of the injuries and damage it sustained as a result of the JUUL youth vaping crisis.

#### **INTRODUCTION**

- 1. One of the great public health success stories over the past decade has been a reduction in youth tobacco use and in nicotine addiction. Youth smoking rates had plummeted from 28% in 2000 to 7.6% in 2017. This success has been the result of years of litigation and strict regulation. It is also due to a public health message that Big Tobacco can no longer dispute or contradict, and which is simple, stark, and effective: smoking kills.
- 2. This incredible progress towards eliminating youth tobacco use has now largely been reversed due to JUUL's e-cigarette products and vaping. Between 2011 and 2015, e-cigarette use among high school and middle school students increased 900%.<sup>2</sup> Between 2017 and 2018, e-cigarette use increased 78% among high school students, from 11.7% of high school students in 2017 to 20.8% of high schoolers in 2018.<sup>3</sup> Among middle school students, e-cigarette use increased 48% between 2017 and 2018.<sup>4</sup> In 2018, 4.9 million middle and high school students used tobacco products, with 3.6 million of those students using e-cigarettes.<sup>5</sup> Between 2017 and 2018, the number of youth e-cigarette users increased by 1.5 million.<sup>6</sup>
- 3. Consistent with this trend, students in DJUSD are vaping at high rates, which continue to climb. From 2015 to 2019 there were 33 critical incidents related to vaping and e-cigarettes, with 14

incidents related to vaping in the 2018-19 school year alone. Since 2015, the number of school disciplinary interactions for e-cigarettes have increased 250% districtwide. These numbers dramatically underestimate the total incidence of vaping and e-cigarette use on campus, as they reflect only critical incidents reported by principals.

- 4. According to the Centers for Disease Control and Prevention ("CDC") Director Robert Redfield, "The skyrocketing growth of young people's e-cigarette use over the past year threatens to erase progress made in reducing tobacco use. It's putting a new generation at risk for nicotine addiction." The U.S. Food and Drug Administration ("FDA") Commissioner Scott Gottlieb described the statistics related to youth vaping as "astonishing" and both the FDA and the U.S. Surgeon General have appropriately characterized youth vaping as an "epidemic." The National Institute on Drug Abuse found that the 2018 spike in nicotine vaping was the largest for any substance recorded in 44 years, and the Secretary of the U.S. Department of Health and Human Services declared that "[w]e have never seen use of any substance by America's young people rise as rapidly as e-cigarette use [is rising]."
- 5. A major cause of this epidemic is JUUL Labs, Inc., the maker of the JUUL e-cigarette. JUUL entered the e-cigarette market in 2015 and now controls over 70% of it. 10 Over a million JUUL e-cigarettes were sold between 2015 and 2017. 11 In 2017, JUUL generated over \$224 million in retail

sales, a 621% year-over-year increase. 12 By June 2018, sales had skyrocketed another 783%, reaching \$942.6 million. 13 The e-cigarette category as a whole grew 97% to \$1.96 billion in the same period, largely based on JUUL's market success. 14 JUUL's dominance of the e-cigarette market has been so rapid, and so complete, that the act of vaping is now often referred to as "juuling."

- 6. JUUL's market dominance has attracted the attention of government regulators, including the FDA. On February 24, 2018, the FDA sent a letter to JUUL expressing concern about the popularity of its products among youth and demanding that JUUL produce documents regarding its marketing practices. 15 On September 12, 2018, the FDA sent letters to JUUL and other e-cigarette manufacturers putting them on notice that their products were being used by youth at disturbing rates. <sup>16</sup> In October 2018, the FDA raided JUUL's headquarters and seized more than a thousand documents relating to JUUL's sales and marketing practices. <sup>17</sup> As of October 2019, the FDA, the Federal Trade Commission, multiple state attorneys general, and the U.S. House of Representatives Committee on Oversight and Reform have all commenced investigations into JUUL's role in the youth vaping epidemic and whether JUUL's marketing practices purposefully targeted youth.
- 7. JUUL now insists it never marketed to young people. This assertion is patently false. JUUL has compelled a generation of youth, who were never cigarette smokers, into nicotine addiction and put them at risk for severe lung injury and/or other health harms resulting from aerosol inhalation. JUUL is working to maintain JUUL's record-breaking sales and market dominance—which would not be possible if the customer base was truly only adults looking to quit smoking, or for a purported

# **FACTUAL ALLEGATIONS**

# A. Following Big Tobacco's lead

- 4. JUUL was founded by Adam Bowen and James Monsees. The company's beginnings can be traced to the pair's collaboration on a product design master's thesis when they were graduate students at Stanford University in 2004—Monsees completing a Master of Fine Arts in Product Design, and Bowen a Master of Science in Mechanical Engineering in Product Design. <sup>19</sup> Their proposed product? A better cigarette.
- 5. Monsees has described the cigarette as "the most successful consumer product of all time . . . an amazing product." But years of anti-smoking campaigns have successfully denormalized cigarette smoking. As part of their product design research, Monsees and Bowen interviewed smokers who talked about feeling self-conscious of the signs of smoking, for example, coming back into a room after a smoke break and smelling like smoke, or having their hands smell like cigarettes even after washing them multiple times. They ended their presentation with a clip from an episode of South Park, a satirical cartoon, showing the characters assembled at the Museum of Tolerance and shaming a smoker. Monsees and Bowen set out to "deliver[] solutions that refresh the magic and luxury of the tobacco category" and recreate the lost "ritual and elegance that smoking once exemplified."

- 6. Essentially, Monsees and Bowen saw a market opportunity in a generation of consumers brought up on anti-smoking norms. In Monsees' words, they wanted to redesign the cigarette "to meet the needs of people who want to enjoy tobacco but don't self-identify with—or don't necessarily want to be associated with—cigarettes."<sup>24</sup> Monsees saw "a huge opportunity for products that speak directly to those consumers who aren't perfectly aligned with traditional tobacco products."25
- 7. At one point during their thesis presentation, Monsees states, "The cigarette is actually a carefully engineered product for nicotine delivery and addiction."26 This description applies just as well to the product he and Bowen would launch a decade later—JUUL.
- 8. The outcome of Monsees and Bowen's thesis project was a "heat-not-burn" e-cigarette, which uses loose-leaf tobacco. The device heated tobacco contained in pods to a constant temperature, vaporizing nicotine and flavor without burning the materials or producing smoke.
- 9. After graduation, Bowen and Monsees worked on bringing their thesis project to the market, incorporating under the name Ploom in 2007. In those early years, they spent a lot of time talking about what Bowen called "the kind of typical thoughts of evil Big Tobacco companies like coming down and squashing you."27 But ultimately, that "was not really an issue."28 In fact, not only did Big Tobacco not squash them, but the opposite. Although Bowen and Monsees characterized their products as aimed toward consumers not aligned with traditional tobacco products, they themselves have aligned with Big Tobacco on at least two occasions: first, with Japan Tobacco and then with JUUL.
- 10. In 2010, Ploom launched its e-cigarette as the ModelOne, using pods of loose-leaf tobacco heated by butane. It did not catch on. Ploom only sold a few thousand units. By then a company with a dozen employees, Ploom was faltering, in need of money, technological expertise, and marketing savvy.<sup>29</sup>

- 11. Help came from Japan Tobacco International ("JTI"), a division of Japan Tobacco Inc., the fourth-largest tobacco company in the world. In December 2011, JTI and Ploom entered into a strategic agreement, which gave JTI a minority stake in Ploom and made it a strategic partner. In a statement regarding the agreement, Monsees said, "We are very pleased to partner with JTI as their deep expertise, global distribution networks and capital resources will enable us to enter our next phase of growth and capitalize on global expansion opportunities." As Bowen explained in an interview, "We were still doing a lot of our own internal product development, but now we had access to floors of scientists at JTI."
- 12. In 2012, Ploom unveiled the PAX, a loose-leaf vaporizer that didn't use pods, but which was much more successful. The following year, Ploom combined elements of the PAX with the pod system as the ModelTwo. Although consumers were enthusiastic about both the PAX and the ModelTwo, the products were limited to a small, high-end market. The PAX, for example, retailed for \$250 when it was first marketed. But, as one of Ploom's investors remarked in 2014, "The company is going to invade the bigger, lower-end market now dominated by e-cigarettes." He explained that Ploom had "lots of products in the works" and that "we know we need something cheaper than PAX to go after the mass market. There are still huge opportunities out there." 31
- 13. In February 2015, Ploom and JTI ended their relationship, with Ploom buying back JTI's minority stake in the business. JTI acquired the ModelTwo and pods product line, as well as the Ploom name, while Ploom kept its open-system PAX vaporizer and changed its name to PAX Labs Inc. Monsees characterized the partnership as having "afforded both parties many mutual benefits," but said that the new arrangement would "fuel continued growth" and that PAX intended "rapid rollouts of new products." <sup>32</sup>
  - 14. PAX made good on its promise of new products and invading the bigger, lower-end

27

28

market. As discussed further below, PAX launched the JUUL in June 2015 with a well-publicized launch party in New York City and a viral social media marketing campaign.

- 15. The company renamed itself JUUL Labs, Inc. in 2017.
- 16. By the close of 2017, according to Nielsen data, JUUL had surpassed its competitors in capturing 32.9 percent of the e-cigarette market. The total e-cigarette market itself expanded 40 percent to \$1.16 billion. 33
- In 2018, JUUL's gross profit margins were 70% 34 and it represented 76.1% of the 17. national e-cigarette market.<sup>35</sup> In a complaint it filed in November 2018 against 24 vape companies for alleged patent infringement, JUUL asserted that it was "now responsible for over 95% of the growth in the ENDS pod refill market in the United States" and included the following chart: 36

	Nielsen			IRI		
	Apr 21	Sep 8	Share of Growth	Apr 22	Sep 9	Share of Growth

<sup>&</sup>lt;sup>35</sup> Robert K. Jackler et al., JUUL Advertising Over Its First Three Years on the Market 2, Stanford Res. into the Impact of Tobacco Advert. (2019),

http://tobacco.stanford.edu/tobacco\_main/publications/JUUL\_Marketing\_Stanford.pdf

<sup>&</sup>lt;sup>36</sup> Verified Complaint Under Section 337 of the Tariff Act of 1930 at 6, In the Matter of Certain Cartridges for Elec. Nicotine Delivery Sys. & Components Thereof, Investigation No. 337-TA-1141 (USITC Nov. 19, 2018)

- 18. JUUL shattered previous records for reaching decacorn status, reaching valuation of over \$10 billion in a matter of months—four times faster than Facebook.<sup>37</sup> This all came just three years after its product launch.
- 19. JUUL's staggering commercial success didn't come from a blank slate. Under the Master Settlement Agreement between Big Tobacco and the States, the public has access to hundreds of thousands of Big Tobacco's internal documents. In creating JUUL, Monsees and Bowen carefully studied the marketing strategies, advertisements, and product design of Big Tobacco. As Monsees candidly acknowledged, the internal tobacco documents "became a very intriguing space for us to investigate because we had so much information that you wouldn't normally be able to get in most industries. And we were able to catch-up, right, to a huge, huge industry in no time. And then we started building prototypes." <sup>38</sup>
- 20. Monsees and Bowen reviewed documents in the Big Tobacco archive that included information on how to manipulate nicotine pH to maximize nicotine delivery in a vapor while minimizing the "throat hit" that may potentially deter new smokers. Other records related to tobacco industry market strategies and advertisements designed to lure non-smoking youth. Monsees and Bowen were able to take advantage of an extensive online tobacco advertising research database maintained by the Stanford Research into the Impact of Tobacco Advertising ("SRITA"), an inter-disciplinary research group devoted to researching the promotional activities of the tobacco industry. SRITA's database contains approximately 50,000 original tobacco advertisements. According to Monsees, JUUL's advertising was informed by traditional tobacco advertisements, and SRITA in particular had been very useful to JUUL.<sup>39</sup>
- 21. It is no secret that a good portion of the Big Tobacco playbook involved targeting youth. Beginning in the 1950s, JUUL's now corporate affiliate, Philip Morris, intentionally marketed cigarettes

<sup>&</sup>lt;sup>37</sup> Zack Guzman, Juul Surpasses Facebook As Fastest Startup to Reach Decacorn Status, Yahoo! Fin. (Oct. 9, 2019), <a href="https://finance.yahoo.com/news/juul-surpasses-facebook-fastest-startup-reach-decacorn-status-153728892.html">https://finance.yahoo.com/news/juul-surpasses-facebook-fastest-startup-reach-decacorn-status-153728892.html</a>.

<sup>&</sup>lt;sup>38</sup> Montoya, supra note 19.

<sup>&</sup>lt;sup>39</sup> Jackler et al., supra note 34 at 27.

to young people under the age of 21 to recruit "replacement smokers" to ensure the economic future of the tobacco industry. 40 Philip Morris knew that youth smoking was essential to the tobacco industry's success and longevity, as an internal Philip Morris document makes clear: "It is important to know as much as possible about teenage smoking patterns and attitudes. Today's teenager is tomorrow's potential regular customer, and the overwhelming majority of smokers first begin to smoke while still in their teens."41 For this reason tobacco companies focused on the 14-24 year-old age group, because "young smokers have been the critical factor in the growth" of tobacco companies and the 14-18 year-old group is an increasing segment of the smoking population.<sup>42</sup> As the Vice-President of Marketing at R.J. Reynolds Tobacco Company ["RJR"] explained in 1974, the "young adult market . . . represent[s] tomorrow's cigarette business. As this 14-24 age group matures, they will account for a key share of the total cigarette volume—for at least the next 25 years."43

- 22. Big Tobacco is now prohibited from employing these tactics and strategies to market traditional cigarettes. Nothing prevented JUUL from doing so.
- Restrained from its historical playbook, Big Tobacco has looked for opportunities for 23. growth in the e-cigarette market. In December 2018, Altria, the maker of Marlboro cigarettes and a Tobacco giant, took a 35% stake in JUUL and invested billions into the company. Seeing JUUL as a proven gateway to other substances, including cigarettes, Altria saw an opportunity to expand JUUL's market share and grow the e-cigarette market in the hopes of ultimately driving more cigarette and tobacco use and nicotine addiction. Altria could use JUUL to circumvent the regulatory and legal restrictions on Big Tobacco's marketing tactics.

### B. JUUL targeted kids

- 24. Because of Big Tobacco's demonstrated effectiveness at addicting youth to nicotine, cigarette manufacturers operate under tight restrictions regarding their advertising and marketing activities. By way of example, cigarette companies may not:
  - A. Use outdoor advertising such as billboards;
  - B. Sponsor events;
  - C. Give free samples;
  - D. Pay any person to use, display, make reference to or use as a prop any tobacco product, tobacco product package in any media;
  - E. Pay any third party to conduct any activity which the tobacco manufacturer is prohibited from doing; or
  - F. Sell "flavored" cigarettes.
- 25. All of these above activities were prohibited because of their effectiveness at appealing to youth. As described below, all of these activities figured prominently in JUUL's marketing campaign.
- 26. According to Dr. Robert Jackler, an otolaryngologist and professor at Stanford University School of Medicine and principal investigator for SRITA, JUUL's initial marketing was "patently youth oriented."44 JUUL's 2015 ad campaign, called "Vaporized" was designed to create a "cult-like following."45 Its imagery featured a vivid color scheme and models in their twenties in poses that researchers note are evocative of behaviors more characteristic of underage teens than mature adults.<sup>46</sup> Dr. Jackler and his colleagues found it "clear" that this imagery resonated with underage teens who aspire to emulate trendsetting young adults.<sup>47</sup>

 $28 \parallel_{52} \frac{10}{12}$ 

27. Tobacco advertisers have long understood that teens are attracted to such imagery. The Vaporized campaign was featured on the front page of VICE magazine, "the #1 youth media company in the world." In the summer of 2015, an animated series of Vaporized billboards, with the campaign's youth-appealing imagery, were displayed in New York's Times Square. 49

28. Over the first year after JUUL launched its ad campaign in June 2015, it held a series of at least 50 highly stylized parties, typically with music entertainment, in cities across the United States.<sup>50</sup> Thousands of young people were given free nicotine-filled JUULpods (appropriately named "JUUL starter kits"), and JUUL posted photos of various young people enthusiastically puffing on JUULs across their social media channels.<sup>51</sup> JUUL advertising also featured popular stars such as Katy Perry holding a JUUL at the Golden Globes.<sup>52</sup>

29. JUUL knew these images would be successful in achieving the intended result because it intentionally crafted them to mimic specific traditional tobacco advertisements that Big Tobacco had used to target teens. In fact, many of JUUL's ads are nearly identical to old cigarette ads that were designed to get teens to smoke. Like its Big Tobacco predecessors, the focus of JUUL's initial marketing

was on colorful ad campaigns using eye-catching designs and youth-oriented imagery with themes of being cool, carefree, stylish, attractive, sexy and popular—unusual themes and images if one's objective is to promote an adult-only smoking cessation device.<sup>53</sup>

JUUL used Big Tobacco's effective advertising imagery, but coupled it with a modern,

state-of-the-art marketing campaign designed to target youth. It relied heavily on social media, crafting

a powerful online presence, which persists even after JUUL deleted its accounts in the face of mounting

public scrutiny. JUUL was particularly active on Instagram, which is the most popular social media site

among teens.<sup>54</sup> JUUL cultivated hashtags, allowing it to blend its ads in with wide range of user content,

increasing exposure while concealing the commercial nature of the content.<sup>55</sup> JUUL then used hashtags

to reinforce the themes it crafted in its product design, like #style, #technology, #smart, and #gadget.

JUUL's hashtags attracted an enormous community of youthful posts on a wide array of subjects. According to Dr. Jackler, #Juul contains literally thousands of juvenile postings, and numerous Instagram hashtags contain the JUUL brand name. 56

- 31. Even after JUUL halted its own social media posts in November 2018, viral peer-to-peer promotion among teens insured continued corporate and product visibility among young people.<sup>57</sup> In fact, community posts about JUUL increased after JUUL itself quit social media in the Fall of 2018. Prior to November 2018, over a quarter of a million posts appeared. In the eight months after JUUL halted its promotional postings, the rate of community postings increased significantly, resulting in the number of posts doubling to over half a million.<sup>58</sup>
- 32. JUUL also paid social media influencers to post photos of themselves with JUUL devices and to use the hashtags that it was cultivating.<sup>59</sup> JUUL entered a contract with an advertising agency specifically to identify and recruit social media influencers that had at least 30,000 followers to, according to an internal JUUL email, "establish a network of creatives to leverage as loyalists" for the JUUL brand. 60 One such influencer was Christina Zayas, whom JUUL paid \$1,000 for just one blog post and one Instagram post in the Fall of 2017.
- 33. JUUL instituted an "affiliate program" to recruit those who authored favorable reviews of its products by providing such reviewers with a 20% discount of purchases of JUUL products.<sup>61</sup> It even recruited JUUL users to act as part of their marketing team by asking users to "refer a friend and get a discount."62
- 34. Such tactics masked JUUL advertisements as user content, further increasing exposure and ultimately solidifying the company in teen pop culture as a form of cultural currency. JUUL's

<sup>61</sup> Jackler Testimony at 9-10

<sup>&</sup>lt;sup>62</sup> *Id*. at 9.

strategy was so successful in embedding its products into pop culture that it entered the vernacular as a verb. The JUUL device and the term "juuling" are so pervasive that JUUL effectively eliminated not only competitors, but also any potentially alarming terms like "smoking" or "e-cigarette," which could alert users to the true nature of the device or activity. A recent study found that 63% of adolescent JUUL users did not know that JUULpods contain nicotine. <sup>63</sup> This has worked to JUUL's advantage and was a deliberate part of its strategy. In the first year after its launch, not one of JUUL's 171 promotional emails said anything about nicotine content, <sup>64</sup> and it did not include nicotine warnings on the JUUL packaging until August 2018, only after it was forced to do so.

35. The design of JUUL's product is also acutely attractive to youth. Unlike most of its predecessors, JUUL looks nothing like a cigarette. Instead, JUUL is sleek and linear and seems like the latest tech invention. This is not surprising, given the founders' Silicon Valley product design education and training. JUUL co-founder Adam Bowen drew on his experience as a design engineer at Apple to make JUUL's design mimic technology children were already familiar with, like Apple's iPhone. <sup>65</sup> This made JUULs look "more like a cool gadget and less like a drug delivery device. This wasn't smoking or vaping, this was JUULing. <sup>66</sup> The evocation of technology makes the JUUL device familiar and desirable to the younger, tech-savvy generation, particularly teenagers. According to 19-year-old Michelle Williams, "our Grandma's have iPhones now, normal kids have JUULs now. Because it looks so modern, we kind of trust modern stuff a little bit more so we're like, we can use it, we're not going to have any trouble with it because you can trust it." 15-year-old Sam Friedman agrees: "The tech aspect definitely helps people get introduced to it and then once they're introduced to it, they're staying, because they are conditioned to like all these different products. And then this is another product. And it's just another product. Until you're addicted to nicotine." <sup>67</sup>

<sup>&</sup>lt;sup>63</sup> Juul e-Cigarettes Gain Popularity Among youth, But Awareness of Nicotine Presence Remains Low, Truth Initiative (Apr. 18, 2018), <a href="https://truthinitiative.org/sites/default/files/media/files/2019/03/JUUL-E-cigarettesGain-Popularity-Among-Youth-But-Awareness-of-Nicotine-Presence-Remains-Low.pdf">https://truthinitiative.org/sites/default/files/media/files/2019/03/JUUL-E-cigarettesGain-Popularity-Among-Youth-But-Awareness-of-Nicotine-Presence-Remains-Low.pdf</a>.

<sup>&</sup>lt;sup>66</sup> *Id*. <sup>67</sup> *Id*.

- 36. The JUUL device even has features reminiscent of youth-oriented tech culture and gaming, like "secret" features users can unlock, such as making the indicator light flash rainbow colors in "party mode." JUUL has been so successful in emulating technology that the small, rectangular devices are often mistaken for—or passed off as—flash drives.
- 37. The ability to conceal a JUUL is also part of the appeal for adolescents. The devices are small and slim, so they fit easily in a closed hand or a pocket. The ease and simplicity of use—there is nothing to light or unwrap, or even an on-off switch—also make it possible to covertly use a JUUL behind a turned back, which has become a trend in many schools. Finding new ways to hide the ever-concealable JUUL has spawned products designed just for that purpose, such as apparel that allows the wearer to use the device while it is concealed in the drawstring of a hoodie or the strap of a backpack.<sup>68</sup>
- 38. JUUL also created special flavors that make its addictive, high-tech device even more attractive to adolescents. Tobacco companies have known for decades that flavored products are key to nicotine adoption by youth. A 1972 Brown & Williamson memorandum: "Youth Cigarette New Concepts," specifically noted the "well known fact that teenagers like sweet products." According to 2004 data, 17-year-old smokers were more than three times likely as those over 25 to smoke flavored cigarettes and viewed flavored cigarettes as safer. For this reason, in 2009 the FDA banned flavored cigarettes pursuant to its new authority under the Family Smoking Prevention and Tobacco Control Act of 2009. In announcing the ban, FDA Commissioner Dr. Margaret Hamburg declared that "flavored cigarettes are a gateway for many children and young adults to become regular smokers."
- 39. There is no reason to believe that flavors play any different role with respect to ecigarettes and youth. In fact, a 2017 study of the cigarette flavor ban found that the ban was effective in

<sup>71</sup> Id.

lowering the number of smokers and the amount smoked by smokers, though it was associated with an increased use of menthol cigarettes (the only flavor still available). According to the Surgeon General, 85% of adolescents who use e-cigarettes use flavored varieties. Studies also show that flavors motivate e-cigarette initiation among youth, and that youth are much more likely to use flavored tobacco products than adults are. Despite JUUL's claims that its target market is adult smokers, JUUL sold its product in flavors like Cool Mint, Crème Brulee, Fruit Medley, Cucumber, and Mango. These flavors were the reason countless adolescents started using JUUL products.

- 40. The flavors pose dangers beyond luring young people into trying nicotine. Studies now show these sweet and fruity flavors present distinct additional health hazards. Researchers have found that some of the chemicals JUUL uses for flavor and perfume contain relatively high levels of acetals. Acetals are airway-irritating chemicals that may cause lung damage. Dr. Robert Jackler said that test results have shown that JUUL's sweet and fruity flavors "contribute[] to the increasing body of evidence documenting toxicological effects of e-cig vapor." <sup>76</sup>
- 41. It is clear that JUUL targeted youth as a key business demographic. A recent study showed that 15 through 17-year-olds are 16 times more likely to use JUUL than 25-34 year olds.<sup>77</sup>

- 42. JUUL was well aware from the beginning that its products would appeal to youth. A former JUUL manager, who spoke to The New York Times on the condition that his name not be used because he worried about facing retribution from the company, said that within months of JUUL's 2015 introduction, it became evident that teenagers were either buying JUULs online or finding others who made the purchases for them. Some people bought more JUUL kits on the company's website than they could individually use—sometimes 10 or more devices at a time. "First, they just knew it was being bought for resale," said the former senior manager, who was briefed on the company's business strategy. "Then, when they saw the social media, in fall and winter of 2015, they suspected it was teens." "78
- 43. This "suspicion" has been confirmed by the U.S. Surgeon General, who found that JUUL's Twitter account was being followed by adolescents and that 25% of those retweeting official JUUL tweets were under 18 years old.<sup>79</sup>
- 44. By the fall of 2018, JUUL was under intense scrutiny. A group of eleven United States senators wrote JUUL's CEO, Kevin Burns, a letter in April 2018, declaring that the JUUL device and JUULpods "are undermining our nation's efforts to reduce tobacco use among youth and putting an entire new generation of children at risk of nicotine addiction and other health consequences." Less than a week later, then FDA Commissioner Gottlieb announced a crackdown on retailers to limit youth access to e-cigarettes and enforcement actions against JUUL in particular. At the same time, the FDA sent JUUL a request for documents relating to marketing, product design, and public health impact. In July 2018, Massachusetts Attorney General Maura Healey announced an investigation into JUUL

regarding marketing and sale to minors.<sup>83</sup> In September 2018, FDA Commissioner Gottlieb called youth vaping an "epidemic" and sent letters to JUUL and other e-cigarette manufacturers demanding a plan to reduce youth use.<sup>84</sup> Then, in October 2018, as alleged above, the FDA raided JUUL's headquarters and seized more than a thousand documents relating to JUUL's sales and marketing practices.<sup>85</sup>

# C. Addictive By Design

- 45. In addition to designing its devices to be particularly attractive to youth, JUUL designed its devices to be highly addictive. Unlike most other e-cigarettes, which use freebase nicotine, JUUL uses patented nicotine salts from which it makes liquid nicotine cartridges, or JUULpods. Reach JUULpod is, according to the Company, the equivalent of a pack of cigarettes. Each pod contains an alarming amount of nicotine, with up to 59 mg per ml—an amount that is roughly three times the amount of nicotine that can be sold to consumers in the European Union in a JUULpod. On top of ramping up the amount of nicotine, JUULpods enabled the Company to increase the rate and amount of nicotine delivery to the JUUL user, roughly doubling the concentration and tripling the delivery speed of nicotine of the average e-cigarette. Reach pod contains an alarming amount of nicotine delivery to the JUUL user, roughly doubling the concentration and tripling the delivery speed of nicotine of the average e-cigarette.
- 46. Big Tobacco spent decades manipulating nicotine in order to foster and maintain addiction in their customers. RJR developed and patented nicotine salt additives, including nicotine benzoate, to increase nicotine delivery in cigarette smoke. The objective was to provide an additional "nicotine kick" based on increased nicotine absorption associated with lower pH. JUUL uses this very same concept for its market-dominating e-cigarettes. The Company's patent for its nicotine salts

<sup>&</sup>lt;sup>87</sup> How Much Nicotine is In Juul?, Truth Initiative (Feb. 26, 2019), <a href="https://truthinitiative.org/researchresources/emerging-tobacco-products/how-much-nicotine-juul">https://truthinitiative.org/researchresources/emerging-tobacco-products/how-much-nicotine-juul</a>.

describes a process for combining benzoic acids with nicotine, a formulation that mimics the nicotine salt additive developed by RJR. JUUL's use of benzoic acid and manipulation of pH affect the palatability of nicotine inhalation by reducing the "throat hit" that users experience when vaping. Indeed, this was the objective behind using nicotine salts (as compared to "free base nicotine" which has a higher pH). According to Ari Atkins, one of the inventors of the JUUL device, "[i]n the tobacco plant, there are these organic acids that naturally occur. And they help stabilize the nicotine in such a way that makes it . . . I've got to choose my words carefully here: Appropriate for inhalation."88

- 47. Because smokers are already accustomed to a certain level of harshness and throat hit, developing a product with low levels of harshness and minimal "throat hit" is only a critical concern if your goal is to appeal to non-smokers, and specifically, young people. Minimizing the harshness of nicotine also allows one to vape more frequently and for longer periods of time and masks the amount of nicotine being delivered by eliminating the unpleasant throat hit normally associated with large doses of nicotine. The harshness of free base nicotine makes prolonged vaping difficult; the use of nicotine salts solves that problem. Put another way, the nicotine salt technology behind JUULpods makes JUUL "smoke" highly potent yet hardly perceptible.
- 48. The increased nicotine exposure facilitated by the JUUL device has serious health consequences. The ease of use and "smoothness" strip away external inhibitors and enable extreme levels of unfettered use. Using the JUUL's own calculations, consuming two JUULpods in a day is the equivalent of consuming two to four packs of cigarettes a day. In this way, JUUL has not only created a new generation of e-cigarette smokers, but has also pioneered a new style of smoking—vaping—that is more nicotine-saturated than ever before.
- 49. Increased rates and duration of smoking lead to greater overall exposure to nicotine. Nicotine is a neurotoxin. A highly addictive, psychoactive substance that targets brain areas involved in emotional and cognitive processing, nicotine poses a particularly potent threat to the adolescent brain, as it can "derange the normal course of brain maturation and have lasting consequences for cognitive

<sup>&</sup>lt;sup>88</sup> David Pierce, This Might Just Be the First Great E-Cig, Wired.com (Apr. 21, 2015), <a href="https://www.wired.com/2015/04/pax-juul-ecig/">https://www.wired.com/2015/04/pax-juul-ecig/</a>.

 $\begin{bmatrix} 27 \\ 28 \end{bmatrix}$ 

ability, mental health, and even personality."<sup>89</sup> Animal researchers from the Yale University School of Medicine has found that vaping during adolescence can lead to long-term brain changes, like attention deficit hyperactivity disorder.<sup>90</sup>

- 50. Studies also show that exposure to nicotine as a teen—even minimal exposure—biologically primes the brain for addiction and greatly increases likelihood of dependence on nicotine as well as other substances later in life. <sup>91</sup> In a study done on mice, even "very brief, low-dose exposure to nicotine in early adolescence increases the rewarding properties of other drugs, including alcohol, cocaine, methamphetamine—and these are long-term changes." <sup>92</sup>
- 51. JUUL's use of flavors only amplifies its addictive qualities. Research done by Nii Addy, associate professor of psychiatry and cellular and molecular physiology at the Yale School of Medicine, found that "sweet flavors can make the nicotine more palatable . . . but also act in the brain to increase nicotine taking." This effective is especially troubling for teenage brains, which are more sensitive than adult brains to rewards. According to University of Pennsylvania psychologist Janet Audrain-McGovern, research shows that "if the first e-cigarette you used was flavored, then you're more likely to go on and use an e-cigarette again." <sup>94</sup>
- 52. According to congressional testimony from Dr. Jonathan Winickoff, a professor of pediatrics at Harvard Medical School and the Director of Pediatric Research in the Tobacco Research and Treatment Center, "[n]icotine addiction can take hold in only a few days, especially in the developing adolescent brain that is particularly vulnerable to addiction to nicotine. . . Many of my

<sup>&</sup>lt;sup>92</sup> Hamilton, supra note 92 <sup>93</sup> *Id*.

<sup>&</sup>lt;sup>94</sup> *Id*.

patients find Juul nearly impossible to stop. Nicotine withdrawal can cause headaches, insomnia, irritability, anxiety, and depression, and these withdrawal symptoms are one of the primary reasons a nicotine addiction is difficult to overcome." Moreover, there is a lack of effective tools to help adolescents overcome nicotine addiction: there is no good data on how to treat adolescents with ecigarette dependence; there has not been enough research on youth tobacco cessation strategies; and most of the pharmacological therapies approved for adults have been shown to be ineffective or only marginally effective in adolescents. <sup>95</sup>

- 53. Research in Massachusetts indicates that daily JUUL and other e-cigarette use is much more likely to continue than daily cigarette smoking. Out of the surveyed students who reported ever using cigarettes, only 17% indicated that they remained daily smokers. Out of the surveyed students who reported ever using e-cigarettes daily, 58% remained daily users. This data demonstrates both that e-cigarette use in teens is very persistent, a result consistent with the addictiveness of JUUL and the difficulty teens have in trying to quit. <sup>96</sup>
- 54. E-cigarette use also puts adolescents at increased risk for cigarette smoking. Compared to adolescents who do not use e-cigarettes, those who do are 3.5 times more likely to begin smoking cigarettes
- 55. The dangerous and destructive nature of nicotine is not a recent discovery. As a key ingredient in tobacco products, the drug and its deleterious effects have been the subject of scientific research and public health warnings for decades. Nicotine causes cardiovascular, reproductive, and immunosuppressive problems with devastating effects. Part of the reason the national decline in cigarette use in recent years was such a victory for public health was because there was a corresponding decline in teen exposure to nicotine. From 2000 to 2017, the smoking rate among high school students fell by

<sup>&</sup>lt;sup>95</sup> Jonathan Winickoff, Testimony of Jonathan Winickoff before the U.S. House of Representatives Committee on Oversight and Reform Subcommittee on Economic and Consumer Policy, U.S. House Committee on Oversight & Reform (July 24, 2019),

96 Id.

- 56. That trend has completely reversed. In 2018, more than one in four high school students in the United States reported using a tobacco product in the past thirty days, a dramatic increase from just one year before. 98 But there was no increase in the use of cigarettes, cigars, or hookahs during that same time period. 99 There was only increased use in a single tobacco product: e-cigarettes. While use of all other tobacco products continued to decrease as it had been for decades, e-cigarette use increased 78% in just one year. 100 This drastic reversal caused the CDC to describe youth vaping an "epidemic." 101
- 57. The teen vaping epidemic, of which JUUL is the architect, has and will continue to have significant costs, both for individual users and for society. Nicotine addiction alone has significant health care costs, and these costs are exacerbated when adolescents are involved. Adolescent nicotine addiction leads to memory and attention problems, and increase chances of addiction later in life, all of which will continue to have long-lasting impacts on society.
- 58. Science is also beginning to show that e-cigarettes have the potential to cause even more, distinct health risks and costs. The very same liquids that enable e-cigarettes to deliver nicotine with such potency are proving to be increasingly dangerous. When heated, the vape liquid turns into aerosol, which may contain, in addition to nicotine, ultrafine toxic particles such as lead, additional chemicals, and volatile organic compounds. These chemicals have the potential to be deadly. Vaping is now

# Teen vaping is surging

Trends in use of cigarettes and vape devices in the past 30 days among 12th-graders

59. Many teenagers are simply unaware of these risks, an ignorance that JUUL preys on. According to Dr. Winickoff, many of his patients believe JUULing is harmless:

Counseling teens and preteens on e-cigarette use is challenging. Many of my patients have wildly incorrect beliefs about e-cigarettes. They know that cigarettes are dangerous, but assume that Juul—since it's ubiquitous, comes in childfriendly flavors, and is marketed as a healthier alternative to smoking—must be harmless. I have to explain to kids that e-cigarettes do not have the same positive health benefits as the fruits whose flavor they copy. Even the term vapor calls to mind harmless water vapor. There is no water in these products.

Winickoff Testimony at 1.

60. In a clear admission of responsibility, JUUL's former CEO Kevin Burns has apologized to all the parents for the vaping epidemic. Mr. Burns said, "I'd tell [the parents] that I'm sorry that their child's using the product." After this apology and in response to the growing number of vape-related

health incidences and the threats of legal action, JUUL replaced Mr. Burns with K.C. Crosthwaite. Mr. Crosthwaite was the chief growth officer at Altria, the makers of Marlboro cigarettes. Replacing Mr. Burns with a "growth executive" from Big Tobacco is a clear sign that JUUL does not plan to stop its

# D. JUUL and School

obsession with growth regardless of public health impacts.

- 61. In addition to severe health consequences, widespread "JUULing" has placed severe burdens on society, and school districts in particular. It is not an overstatement to say that JUUL has changed the educational experience of students across California.
- 62. JUUL use has invaded school bathrooms—now known as "the Juul room." As one high school student explained, "it's just a cloud." The ubiquity of JUUL use in high school bathrooms has generated numerous online spoofs about "the juul room." 111
- 63. Kids have also coined the term "nic sick"—which, as one high school student explained to CBS News, "kinda seems like a really bad flu, like, just out of nowhere. Your face goes pale, you start

throwing up and stuff, and you just feel horrible."112

- 64. Such rampant JUUL use has effectively added another category to teachers' and school administrators' job descriptions; many now receive special training to respond to the various problems that JUUL use presents, both in and out of the classroom. A national survey of middle schools and high schools found that 43.3% of schools have had to implement not only an e-cigarette policy but a JUUL-specific policy. Participants in the survey reported multiple barriers to enforcing these policies, including the discreet appearance of the product, difficulty pinpointing the vapor or scent, and the addictive nature of the product. <sup>113</sup>
- 65. Across the United States, schools have had to divert resources and administrators have had to go to extreme lengths to respond to the ever-growing number of students using JUULs on school grounds. According to the Truth Initiative, more than 40 percent of all teachers and administrators reported that their school uses camera surveillance near the school's restroom, almost half (46 percent) reported camera surveillance elsewhere in the school, and 23 percent reported using assigned teachers for restroom surveillance. Some schools have responded by removing bathroom doors or even shutting bathrooms down, and schools have banned flash drives to avoid any confusion between flash drives and JUULs. Schools have also paid thousands of dollars to install special monitors to detect

<sup>&</sup>lt;sup>112</sup> High school students say about 20% of their peers are vaping, some as young as 8th grade, CBS News (Aug. 31, 2019), <a href="https://www.cbsnews.com/news/high-school-students-say-about-20-of-their-peers-are-vaping-some-asyoung-as-8th-grade/">https://www.cbsnews.com/news/high-school-students-say-about-20-of-their-peers-are-vaping-some-asyoung-as-8th-grade/</a>.

vaping, which they say is a small price to pay compared to the plumbing repairs otherwise spent as a result of students flushing vaping paraphernalia down toilets.<sup>117</sup> Other school districts have sought to create new positions for tobacco prevention supervisors, who get phone alerts when vape smoke is detected in bathrooms.<sup>118</sup>

- 66. DJUSD's restrooms are particularly impacted by this vaping epidemic. as they have become a very common location for vaping to occur on campus. Specifically, we have reports that students refrain from using certain restrooms because of vaping, and, additionally, administrators limit use or close entirely for certain hours restrooms with high incidence of bathroom vaping. In the 2019 Youth Truth student perception survey at Davis Senior High School, many students commented about vaping on campus. The following quotes are examples of some of the student comments related to vaping, which further illustrates the impact of the vaping crisis on DJUSD's educational environment:
  - "I dislike the fact that whenever I go to the bathroom, people are always vaping."
  - "I dislike having to go to the bathrooms and seeing a lot of kids vaping because I need to actually use the restroom and there would be too many people."
  - "I dislike how many people vape in the bathrooms and how i feel like i need to hold my breath to not breath it in."
  - "I don't like some of the bad things few other kids might do at school, like vaping in the bathrooms, etc. because I don't think that is good for the school environment at all."
  - "There is a lot of vaping in the school. I remember in orientation the upperclassmen that were in charge of my group told us not to use the bathroom by the P wing as well as the other bathroom on the first floor of the P wings because of vaping in it and the school can do little to nothing about."
  - "What I dislike most about the school is the fact that people in the bathrooms vape, juul, etc (i'm not sure what they do in there but there's definitely the smell of drugs in there

<sup>&</sup>lt;sup>117</sup> Suzanne Monaghan, Many schools installing vape detectors in bathrooms to discourage e-cigarette use, KYW Newsradio (June 10, 2019), <a href="https://kywnewsradio.radio.com/articles/news/many-schools-installing-vapedetectors-bathrooms-address-rise-e-cigarette-use">https://kywnewsradio.radio.com/articles/news/many-schools-installing-vapedetectors-bathrooms-address-rise-e-cigarette-use</a>.

<sup>&</sup>lt;sup>118</sup> Lauren Katims, California Fights Vaping in Schools, U.S. News & World Report (Apr. 30, 2019), <a href="https://www.usnews.com/news/best-states/articles/2019-04-30/california-focuses-on-education-to-curb-vaping-in-schools">https://www.usnews.com/news/best-states/articles/2019-04-30/california-focuses-on-education-to-curb-vaping-in-schools</a>.

which makes me uncomfortable to go to the bathroom during school hours."

- "Just make a vape room i just want to use the bathroom without getting second hand nicotine poisoning"
- "I do not like how there are no rules against things like vaping that are not safe for others.
   I wish people that choose to do such things are kept restricted and away from the rest of the students."
- "Vaping is a huge problem. I have stopped using the S wing bathroom because so many people are vaping in it."
- "What I dislike most about this school is the fact that I feel like I have to go off campus to use the bathroom, too much vaping in the stalls and it makes me uncomfortable."
- "I dislike the constant vaping in the bathrooms that kids often do."
- 67. Since standard smoke detectors are not designed to detect vape smoke, DJUSD must retrofit its detector systems to fully monitor and deter vaping on our campuses. Even though DJUSD's detectors cannot detect vape smoke, they proved essential in 2019 when an e-cigarette left on top of a restroom soap dispenser set a fire costing hundreds of dollars in repairs and dozens of hours of staff time, in addition to the closing of the restroom until repairs could be made.
- 68. Many schools have shifted their disciplinary policies in order to effectively address the JUUL epidemic. Rather than immediately suspending students for a first offense, school districts have created anti-vaping curricula which students are required to follow in sessions held outside of normal school hours, including on Saturdays. <sup>119</sup> Teachers prepare lessons and study materials for these sessions with information on the marketing and health dangers of vaping <sup>120</sup>—extra work which requires teachers to work atypical hours early in the mornings and on weekends. <sup>121</sup> Some schools will increase their drugtesting budget to include random nicotine tests for students before they join extracurricular activities.

<sup>&</sup>lt;sup>119</sup> Id.

<sup>&</sup>lt;sup>120</sup> Pat Eaton-Robb, Discipline or treatment? Under this drug testing protocol, first offenders will undergo drug and alcohol educational programming; second and third offenders with be forced to sit out from extracurriculars and attend substance abuse counseling. 122

- 69. JUUL actively sought to enter school campuses. The Subcommittee on Economic and Consumer Policy ("Subcommittee") conducted a months-long investigation of JUUL, including reviewing tens of thousands of internal documents, and concluded that JUUL "deliberately targeted children in order to become the nation's largest seller of e-cigarettes." The Subcommittee found that "(1) Juul deployed a sophisticated program to enter schools and convey its messaging directly to teenage children; (2) Juul also targeted teenagers and children, as young as eight years-old, in summer camps and public out-of-school programs; and (3) Juul recruited thousands of online "influencers" to market to teens." <sup>124</sup>
- 70. According to the Subcommittee, JUUL was willing to pay schools and organizations hundreds of thousands of dollars to have more direct access to kids. Such attempts included paying a Baltimore charter school organization \$134,000 to start a summer camp to teach kids healthy lifestyles, for which JUUL itself would provide the curriculum; offering schools \$10,000 to talk to students on campus; and giving the Police Activities League in Richmond, California, \$90,000 to provide JUUL's own vaping education program, "Moving On," to teenage students suspended for using cigarettes. 

  Meanwhile, JUUL would collect data about test scores, surveys, and activity logs about the students.
- 71. Among the more egregious incidents reported by the Subcommittee was a July 24, 2019 presentation -- during which no parents or teachers were in the room which conveyed the message that

11

the JUUL product was "totally safe," and the presenter even demonstrated to the students how to use a JUUL. 126 The school was presumably paid for this meeting, which was marketed to the school as an anti-smoking initiative. A JUUL spokesman said JUUL is no longer funding such programs. 127

# E. Impact on Davis Joint Unified School District.

- 72. The epidemic has severely impacted DJUSD. Vaping negatively disrupts the learning environment as educators, administrators and other staff have to redirect limited resources to the prevention and detection of vaping students. As a result, many school operations have been modified, including restroom supervision, additional student pass procedures, and countless hours investigating and disciplining students for use.
- 73. JUUL use has interrupted the educational environment and is impeding learning in schools throughout the District. The District has suffered at least four types of harm.

First, the surge of vaping disrupts the learning environment as educators have to deal with the prevention and detection of student vaping and modify school property and school operations in response to the problem. With respect to students who are caught vaping, administrators must expend time and resources to deal with the problem and provide supports (e.g., positive behavioral interventions). We have seen vaping and e-cigarette usage continually rise among students since before it was first measured in 2015. In fact, in 2015, 11% of DJUSD eleventh grade students reported currently using e-cigarettes; this number jumped to 16% of eleventh grade students in 2019 as measured by the DJUSD California Healthy Kids Survey 2014-2019: Trends in Key Indicators, Secondary Grades. San Francisco: West Ed Health and Justice Program for the California Department of Education. We expect vaping related statistics in DJUSD to be substantially higher in future years unless substantive changes are made. These numbers dramatically underestimate the total incidence of vaping and e-cigarette use on campus, as they reflect only critical incidents reported by principals. For example, bathrooms cannot be utilized as designed due to the high incidence of bathroom vaping. As another example, because standard smoke detectors are not sufficiently sensitive to detect vape smoke and interferes with fire alarm detectors, the District would need to retrofit its detector systems or procure vaping detectors to fully monitor and prevent in-school vaping on middle school and high school campuses.

<sup>&</sup>lt;sup>126</sup> JUUL's Role in Youth Nicotine Epidemic, supra note 125.

- 74. *Second*, the vaping epidemic hurts individual student learning. Vaping has led to a rise in student absences due to sickness or absenteeism. Research shows that students who attend school more often do better in school. <sup>128</sup> In Massachusetts, the National Bureau of Economic Research found "poor attendance can account for up to a quarter of the math achievement gap between poor and non-poor students." A study of Chicago Public Schools shows "course attendance is eight times more predictive of ninth grade failure than eighth grade test scores." In sum, vaping-related school absences directly impact the academic achievement of the District's students.
- 75. Third, vaping hurts all students in the District, not just those who do it, through less school funding from the State for school operations. The vast majority of revenue the District receives is tied to daily student attendance. Student absences due to vaping related issues cause a reduction in state funding for the District, which inherently results in a reduction in school-site staff for all students. The District receives funding from the State only if students attend school. The more vaping-related students absences from school, the less funding the District gets to spend on learning for all students.
- 76. Fourth, vaping hurts all students by diverting already limited funding away from the learning environment to target educational campaigns, prevention, and treatment. The District will continue to incur extensive costs to orchestrate outreach regarding the risks of vaping, to enforce restrictions regarding vaping in school (for example, through vape smoke detectors), and to develop and carry out protocols associated with the collection and disposal of vape products. In the absence of student vaping, these funds could have gone to the District's core activity educating Davis's youth and implementing specialized programs, lower class size, improved technology, enhanced curricular materials, and academic reading and math instructional intervention programs for students who are struggling academically.

<sup>&</sup>lt;sup>128</sup> Department of Education, 2013-14 Civil Rights Data Collection, <a href="https://www2.ed.gov/datastory/chronicabsenteeism.html#intro">https://www2.ed.gov/datastory/chronicabsenteeism.html#intro</a>

<sup>&</sup>lt;sup>130</sup> Elaine M. Allensworth, & John Q. Easton, "What Matters for Staying On-Track and Graduating in Chicago Public Highs Schools: A Close Look at Course Grades, Failures, and Attendance in the Freshman Year. Research Report." Consortium on Chicago School Research (2007).

77. The District will continue to incur extensive costs to orchestrate outreach regarding the risks of vaping, to enforce restrictions regarding vaping in school (for example, through vape smoke detectors), and to develop and carry out protocol associated with the collection and disposal of vape products. In the absence of student vaping, these funds could have gone to the District's core activity – educating Davis' youth.

# **FIRST CAUSE OF ACTION**

#### **PUBLIC NUISANCE**

- 78. Plaintiff hereby re-alleges and incorporates by reference each and every allegation contained above as though the same were set forth herein in full.
- 79. Defendants created a condition that is harmful to human health; indecent and offensive to the senses; obstructed the free use of property and resources, so as to interfere with the comfortable enjoyment of such property and resources.
- 80. Defendants' actions and omissions have caused an unreasonable and substantial interference in the educational environments in schools across the State of California, including those within the District. This interference is ongoing and continuing.
- 81. Defendants created a condition that affected a substantial number of people at the same time specifically, Defendants have created a vaping epidemic that affects hundreds of thousands, if not millions, of students and all school districts throughout California, including students within the District.
- 82. An ordinary person would be reasonably annoyed and disturbed by Defendants actions as described throughout this Complaint, including marketing and promoting the use of e-cigarettes by minors and the disruption of normal school operations.
- 83. The social utility of Defendants' products do not outweigh the gravity of the harm inflicted on the District.
  - 84. The District did not consent to Defendants' conduct.
- 85. The District suffered and continues to suffer harm different from the type of harm suffered by the general public. Among other reasons discussed throughout the Complaint, vaping has interfered with the educational environment within the District's schools and has required the District

to take certain measures to prevent continued vaping on District campuses.

- 86. Defendants' conduct was a substantial factor in causing the District's harm.
- 87. Defendants' conduct was willful, knowing, and reckless, warranting punitive and exemplary damages.

# **SECOND CAUSE OF ACTION**

### STRICT LIABILITY - DESIGN DEFECT

- 88. Plaintiff hereby re-alleges and incorporates by reference each and every allegation contained above as though the same were set forth herein in full.
- 89. Plaintiff was and continues to be harmed by Defendants' vaping products, which were designed, manufactured, sold, and distributed by Defendants, and which were defectively designed; did not include sufficient instructions; were not properly researched, inspected, or tested; and did not include sufficient warning of potential safety hazards.
- 90. The design of Defendants' vaping products were defective because the vaping products did not perform as safely as an ordinary consumer would have expected them to perform, especially when Defendants' misrepresentations are taken into consideration.
- 91. The gravity of the harm resulting from Defendants' vaping products was, is, and will be enormous. Defendants have created an epidemic among young people that will take enormous resources, time, and effort to curb.
- 92. Defendants' vaping products' failure to incorporate sufficient safety features is a substantial factor in causing Plaintiff's harm.
- 93. Defendants' design of vaping products has resulted in increased harm to young people, such as Plaintiff's students. As a result, school districts, including Plaintiff, must take extensive action incurring significant costs -- to address in-school vaping.
  - 94. Defendants knew that their vaping products cause the type of harm suffered by Plaintiff.
- 95. At all times, there have been safer alternative designs that were and are feasible, cost effective, and advantageous.
- 96. Defendants' conduct lacked any care and was an extreme departure from what a reasonably careful company would do in the same situation to prevent harm to others, and thus

Defendants were and are grossly negligent.

97. Defendants, its officers, directors, and managing agents, engaged in despicable conduct and acted or failed to act with malice, oppression, and fraud, warranting punitive or exemplary damages.

# THIRD CAUSE OF ACTION

#### STRICT LIABILITY - FAILURE TO WARN

- 98. Plaintiff hereby re-alleges and incorporates by reference each and every allegation contained above as though the same were set forth herein in full.
- 99. At all times, Defendants' vaping products have been defective as a result of Defendants' failure to adequately test for safety, failure to give adequate warnings or instructions regarding the possibility of adverse health consequences. Defendants also failed to inform and warn consumers and users through their advertising that they had failed to perform adequate testing of the JUUL e-cigarettes and pods to ensure safety, including long-term testing of the product, testing for injury to the lungs, brain, and cardiovascular systems, and other related medical conditions.
- 100. Defendants failed to both adequately test JUUL e-cigarettes and pods before making it available to consumers and users and failed to disclose through their advertising that extensive health-related testing had not been done and which testing would have disclosed the magnitude of the potential risks associated with the use of the JUUL e-cigarettes and pods.
- 101. In the alternative, Defendants conducted adequate testing but failed to warn about the dangers of using JUUL e-cigarettes and pods in their advertising.
- 102. Defendants' failure to warn was intentional, willful, and malicious. The conduct was carried on with a conscious disregard for the safety and the rights of others, such as Plaintiff.
- 103. As a proximate cause of Defendants' actions, Plaintiff has and will continue to incur substantial expense to address the vaping epidemic at its schools.

# FOURTH CAUSE OF ACTION

#### **NEGLIGENCE**

- 104. Plaintiff hereby re-alleges and incorporates by reference each and every allegation contained above as though the same were set forth herein in full.
  - 105. Defendant had a duty to Plaintiff to exercise due care.

- 106. Defendant breached that duty, as set forth throughout the Complaint.
- 107. Plaintiff was and continues to be harmed by Defendants' negligent conduct as described throughout the Complaint.
  - 108. Plaintiff's harm was foreseeable result of Defendants conduct.
  - 109. Defendants' negligence was a substantial factor in causing Plaintiff's harm.
- 110. Defendants' above-described conduct was willful, knowing, and reckless, warranting punitive and exemplary damages.

# **PUNITIVE DAMAGES ALLEGATION**

- 111. Plaintiff hereby re-alleges and incorporates by reference each and every allegation contained above as though the same were set forth herein in full.
- 112. Defendants expressed a reckless indifference to the safety of users of JUUL e-cigarettes and pods, including students attending Plaintiff's schools. Defendants' conduct, as described herein, knowing the dangers and risks of JUUL e-cigarettes and pods, yet concealing and/or omitting this information in their advertising, in furtherance of their conspiracy and concerted action was outrageous because of Defendants' willful a reckless indifference to the safety of users of JUUL e-cigarettes and pods.
- 113. Plaintiff is entitled to punitive damages because Defendants' failure to warn and other actions as described herein were malicious, wanton, willful or oppressive or were done with reckless indifference to the Plaintiff and the public's safety and welfare. Defendants misled both the FDA and the public at large, including the Plaintiff herein, by making false representations about the safety of their product. In their advertising, Defendants downplayed, understated and/or disregarded their knowledge of the serious and permanent side effects associated with the use of their product, despite available information demonstrating that JUUL e-cigarettes and pods were likely to cause serious side effects.
- 114. Defendants were or should have been in possession of evidence demonstrating that their products caused serious side effects. Nonetheless, they continued to advertise the products by providing false and misleading information with regard to safety and efficacy.
